EDUCATION

The University of Texas at Dallas | *M.S. Computer Science*

Aug. 2021 – May 2023

TECHNICAL SKILLS

Languages: C/C++, ASM, Python, Java, Swift, Objective-C, Rust, GoLang, Javascript, HTML, CSS, MySQL

Tools: IDA Pro, Ghidra, LLDB, BurpSuite, Nmap, Wireshark

Skills: Web Application Security, Mobile App Testing, Thick Client Testing, Reverse Engineering, Network Security, Cloud Security, Scripting, Threat Model Review, Manual Code Review, Cryptography, iOS Tweak Development, AWS

RELEVANT COURSEWORK

- Data & Applications Security, Computer Architecture, Network Security, Machine Learning, Information Security, Database Design, System Security & Malicious Code Analysis, Design & Analysis of Computer Algorithms, Advanced Operating Systems

AWARDS

2022 National Security Agency (NSA) Codebreaker Challenge Solver

August 2022

- Successfully completed 9 out of 9 challenges in the NSA Codebreaker Challenge for the University of Texas at Dallas. Every year, less than 1% of participants solve the codebreaker challenge. Required wide variety of skills in forensics, reverse engineering, protocol analysis, cryptanalysis, software development, and vulnerability research and exploitation.

EXPERIENCE

Security Engineer

August 2023 - January 2026

Bureau Veritas Cybersecurity NAM (formerly Security Innovation Inc.)

Seattle, WA

- Led and executed 40+ security assessments across a variety of services for the world's largest cloud provider spanning web, cloud, and mobile platforms, identifying critical vulnerabilities and ensuring adherence to industry security standards.
- Developed custom scripts and automation tools, including Burp Suite extensions, to address complex project-specific security challenges, and created Scapy-based scripts for network penetration testing such as exploiting IPv6 tunneling vulnerabilities.
- Performed comprehensive threat model reviews to identify potential security risks, evaluated mitigation strategies, and produced detailed project summaries, problem reports, test plans, and actionable recommendations to strengthen defenses.
- Carried out in-depth manual code review and analysis, supported by automated techniques, to assess security risks.
- Conducted advanced research on iOS application decryption for apps requiring newer iOS versions, implemented iOS tweaks and reverse engineered applications built on custom and cross-platform frameworks such as Flutter.

CyberSecurity Intern

2020

Inferno Infosec

Vadodara, India

- Acquired detailed knowledge of various vulnerabilities present in Web, Desktop and Android applications.
- Organized and led a workshop on Reverse Engineering Desktop Applications for Beginners, covering anti-debugging and obfuscation techniques to safeguard applications against reverse engineering.

PROJECTS

Reverse Engineering Flutter Apps

July 2024

- Wrote a white paper on reverse engineering iOS flutter applications.
- Detailed how to use Ghidra scripting to disassemble flutter application binaries and explained the process of metadata extraction and patching a flutter application binary.
- Demonstrated techniques for resolving code and data references in disassembly and handling the Dart VM's custom stack for accurate decompilation.

Binary Analysis

February 2023

- Built custom disassembly and analysis tooling to support instrumentation and binary introspection.
- Performed data-flow analysis, disassembly, ELF binary modification, code injection, and symbolic execution to instrument and manipulate binaries at runtime.
